

Flock-You Detector

A small device that beeps when a license-plate camera is near.

WHAT IT DOES

It listens for the quiet radio signals that surveillance cameras give off. When one is close, it beeps and the light on the board flashes.

It never sends anything, never connects to the internet, and never records anyone.

WHAT IT FINDS

- License-plate reading cameras, the box-on-a-pole kind
- The battery packs and accessories that go with them
- Some other camera equipment that shares the same radio

BEFORE YOU START

You need the detector, a USB cable, and power — a phone charger, a laptop, or a USB battery pack if you want to carry it around.

TURN IT ON

1. Plug the cable into the detector and into power.
2. Wait a few seconds. A short six-note tune plays. That means it is ready.
3. No tune on your version? Watch the small light instead.

WHAT YOU WILL HEAR AND SEE

• Six-note tune, once	Switched on and working
• Two rising beeps	A camera is close by, right now
• Light flashes	The same thing. Works with no sound
• Silence	Normal. Nothing close by

HOW TO USE IT

1. **Carry it with power.** Battery pack, then a bag, bike or dashboard.
2. **Go about your normal trip.** Walk, ride or drive as usual.
3. **When it beeps, slow down.** A camera is very close. Look around.
4. **Same beep in the same place twice?** You have found one.
5. **Press the button** to save what it found. One short beep confirms.

GOOD TO KNOW

- It only hears what is close: a few hundred feet outdoors, much less indoors or in traffic.
- Silence means nothing is close right now, not that there are no cameras anywhere.
- It will not beep twice for the same camera — after the first alert it goes quiet for a while.
- Weak signals are recorded silently, so a beep means a strong match. One beep is worth a look, not proof.

IF SOMETHING SEEMS WRONG

- | | |
|--------------------------|--|
| • No sound at all | Your version may have no buzzer. Watch the light. |
| • Nothing happens | Try another USB cable and another charger. |
| • Beeps non-stop | That is a real, strong signal. Move away and it stops. |

USE IT RESPONSIBLY

- It only listens to radio signals already in the air. It never transmits, never joins a network, and never records anyone.
- Never interfere with any camera or equipment.
- Follow local laws, stay on public ground, and do not trespass.
